## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-20 are rejected under 35 U.S.C. 102(a or b) as being anticipated by any one of Alyfuku et al. (U.S. Patent No. 4,664,495) or Yoshida (U.S. Patent No. 4,941,009) or Yamaguchi et al. (U.S. Patent No. 6,240,253 B1) or Whiteside (U.S. Patent No. 6,516,147 B2).

All four references disclose apparatus and method to generate a meter matrix of brightness and distance information for a plurality of points and selectively asserting a flash control signal based on the meter matrix. Note that Fig. 6 of Whiteside discloses the foreground object in the shape of an I and a background in the shape of an upside U. Alyfuku et al., Yoshida and Yamaguchi et al. all appear to disclose that the difference between the main object and background object must be greater than a predetermined value for activating the flash. See column 23 lines 18-27 in Yamaguchi et al., for example. Note also column 21 lines 15-21 and column 28 lines 48-60 of Yamaguchi et al. describing determined background degrees that are differences of the background distances from the main object distance. It is not apparent that any of the claim language patentably distinguishes over the disclosures of these references.
